

Question 9

State two disadvantages of using CSV (Comma-Separated Values) or TSV (Tab-Separated Values) for data exchange, especially concerning their limitations with data types and metadata.

[illegible]

Question 10

Explain how REST (Representational State Transfer) architecture utilises standard HTTP methods to perform operations on resources, providing an example of an HTTP method and its corresponding CRUD (Create, Read, Update, Delete) operation.

[illegible]

Marking Guide

#	Marking Criteria	Example	Mark
9	States first disadvantage CSV/TSV	CSV files cannot store complex data like images or objects.	1
	States second disadvantage CSV/TSV	CSV has no metadata, so programs must guess data types.	1
10	Explains REST uses HTTP methods	REST uses HTTP methods to perform create, read, update and delete actions.	1
	Provides example method and CRUD	A GET request retrieves data from a server, which matches the Read operation.	1
