Useability and Visual Communication Ext Response 2

21 Marks

"HomeSense" is a new mobile application designed for smart home management, allowing users to control lighting and climate in various rooms. Following its launch, the development team collected user feedback, highlighting several areas of concern:

- **Confusion between control types:** Users frequently report difficulty quickly distinguishing between the "Lighting" and "Climate" control sections within the app.
- Accidental system shutdowns: Several users have reported accidentally triggering "System Shutdown" while intending to "Turn Off All Lights", leading to frustration and unintended disruptions to their home environment.
- **Legibility issues for settings:** Some users struggle to read the exact temperature settings and light intensity percentages displayed on the control interfaces.

a) Analyse the feedback regarding the "HomeSense" smart home application. Identify three distinct

Extended Response Questions:

usability issues from the scenario and explain how each issue relates to a specific usability principle. Provide one specific example from the scenario for each identified issue. [9 marks]

b)	Based on your analysis in part (a), recommend two specific design improvements for the "HomeSense" application. For each recommendation, justify how it would address a usability
	principle and leverage at least one element of visual communication (e.g., colour, form, line,
	proportion, scale, shape, space, tone, texture) to optimise the user experience. [12 marks]
	proportion, scate, shape, space, tone, texture, to optimise the aser experience. [12 marks]

Marking Guide Question 1 & 2

21 Marks

Part A

Response	Mark		
Identifies one distinct usability issue			
Explains how the identified issue relates to a specific usability principle	1		
(utility, safety, accessibility, learnability, or effectiveness)			
Provides one specific example from the scenario for the identified issue	1		
Identifies a second distinct usability issue	1		
Explains how the second identified issue relates to a specific usability principle	1		
(utility, safety, accessibility, learnability, or effectiveness)	I		
Provides one specific example from the scenario for the second identified issue	1		
Identifies a third distinct usability issue			
Explains how the third identified issue relates to a specific usability principle	1		
(utility, safety, accessibility, learnability, or effectiveness)			
Provides one specific example from the scenario for the third identified issue	1		

Part B

Response	Mark
Recommendation 1	
States a clear, specific, and actionable design improvement	1
Identifies a relevant usability principle	1
 Provides a clear and logical justification of how the improvement addresses the identified usability principle, explicitly linking to the scenario 	1
 Identifies at least one appropriate visual communication principle 	1
 Identifies at least one appropriate visual communication element 	1
 Clearly explains how the visual communication element is leveraged to optimise the user experience, explicitly linking to the design improvement 	1
Recommendation 2	
 States a clear, specific, and actionable design improvement 	1
Identifies a relevant usability principle	1
 Provides a clear and logical justification of how the improvement addresses the identified usability principle, explicitly linking to the scenario 	1
 Identifies at least one appropriate visual communication principle 	1
Identifies at least one appropriate visual communication element	1
 Clearly explains how the visual communication element is leveraged to optimise the user experience, explicitly linking to the design improvement 	1

Useability Principles	Visual Comm Principles	Visual Comm Elements
Utility	Balance	Shape
Safety	Alignment	Form
Accessibility	Contrast	Tone
Learnability	Hierarchy	Colour
Effectiveness	Proximity	Line
	Repetitions	Scale
	Harmony	Space
		Proportion
		Texture
