## Question 3

Check the following code for errors.

a) highlight the error in the code [8 marks]

```
FUNCTON Encrypt(plainText, key) RETURNS STRING
alphabet = "ABCDEFGHIJKLMNOPQRSTUVWXYZ"
 2.
 3.
        cipherText = ""
 4.
        i = 0
 5.
        while i < LENGTH(plainText)</pre>
 6.
            plainChar = UPPER(SUBSTRING(plainText, i, 1))
 7.
 8.
            keyChar = UPPER(SUBSTRING(key, 0, 1))
9.
10.
            IF plainChar IN alphabet THEN
11.
                 plainIndex = FIND(alphabet, plainChar)
12.
                 keyIndex = FIND(alphabet, keyChar)
                 cipherIndex = (plainIndex + keyIndex) MOD LENGTH(alphabet)
13.
                 cipherText = cipherText & SUBSTRING(alphabet cipherIndex, 1)
14.
            FISE
15.
16.
                 cipherText = cipherText & plainChar
            END IF
17.
18.
19.
            i = i + 1
        END WHILE
20.
21.
        RETURN cipherText
22.
23. END FUNCTION
24.
25.
26. FUNCTION Decrypt(cipherText, key) RETURNS STRING
        alphabet = "ABCDEFGHIJKLMNOPQRSTUVWXYZ
27.
28.
        plainText = ""
29.
        i = 0
30.
31.
        WHILE i < LENGTH(cipherText)</pre>
            cipherChar = UPPER(SUBSTRING(cipherText, i, 1))
32.
            keyChar = UPPER(SUBSTRING(key, i, 1))
33.
34.
            IF cipherChar IN alphabet THEN
35.
                 cipherIndex = FIND(alphabet, cipherChar)
36.
37.
                 keyIndex = FIND(alphabet, keyChar)
38.
                 plainIndex = (cipherIndex + keyIndex + LENGTH(alphabet)) MOD LENGTH(alphabet)
39.
                plainText = plainText & SUBSTRING(alphabet, plainIndex, 1)
            ELSE
40.
41.
                 plainText = plainText & cipherChar
            END IF
42.
43.
            i = i + 2
44.
45.
        END WHILE
46.
        RETURN plainText
47.
48. END FUNCTION
49.
50.
51. INPUT "Enter message:" -> message
52. INPUT "Enter one-time pad key:" > key
53.
54. cipher = Encrypt(message, key)
55. OUTPUT "Ciphertext: " & cipher
56.

58. OUTPUT "Decrypted: " & decrypted
```

| # | Category | Response   | Mark |
|---|----------|--|------|
| В | Line 1   | FUNCTON misspelt keyword   | 1    |
|   |          | FUNCTION Encrypt(plainText, key) RETURNS STRING  | 1    |
|   | Line 6   | while is lowercase   | 1    |
|   |          | WHILE i < LENGTH(plainText)  | 1    |
|   | Line 8   | One Time Pad must align key position with plaintext position i                           | 1    |
|   |          | <pre>keyChar = UPPER(SUBSTRING(key, i, 1))</pre>   | 1    |
|   | Line 14  | missing comma before cipherIndex   | 1    |
|   |          | <pre>cipherText = cipherText &amp; SUBSTRING(alphabet, cipherIndex, 1)</pre>             | 1    |
|   | Line 27  | missing closing quote on string  | 1    |
|   |          | alphabet = "ABCDEFGHIJKLMNOPQRSTUVWXYZ"  | 1    |
|   | Line 38  | adds keyIndex instead of subtracting   | 1    |
|   |          | <pre>plainIndex = (cipherIndex - keyIndex + LENGTH(alphabet)) MOD LENGTH(alphabet)</pre> | 1    |
|   | Line 44  | i increases by 2, skipping characters  | 1    |
|   |          | i = i + 1  | 1    |
|   | Line 52  | used > instead of -> for INPUT assignment  | 1    |
|   |          | <pre>INPUT "Enter one-time pad key:" -&gt; key</pre>                                     | 1    |
| С | Point 1  | OTP requires a key equal to or longer than the plaintext                                 | 1    |
|   | Point 2  | Current pseudocode does not check key length   | 1    |
|   | Point 3  | If key is shorter, program may crash or leak patterns from the message                   | 1    |
| D |          | Correctly defines a function with the correct name and parameters                        | 1    |
|   |          | Uses LENGTH(message) and LENGTH(key) appropriately                                       | 1    |
|   |          | Includes correct comparison ( < ) to test key length                                     | 1    |
|   |          | Indicates when the key is shorter than message   | 1    |
|   |          | Indicates when the key is the correct length   | 1    |

## Sample Answer part d

```
    FUNCTION CheckKeyLength(message, key) RETURNS BOOLEAN
    IF LENGTH(key) < LENGTH(message) THEN</li>
    RETURN FALSE
```

4. ELSE

RETURN TRUE 5.

6. END IF 7. END FUNCTION
